Final Presentation

As part of this project, you will present a final presentation that is approximately 10 minutes in length with 5 minutes for questions. This final presentation is an overview of the entire project, and will require the following components:

- An introduction to the background for the project and the scope of what was completed.
- An overview of the use cases of the project.
- An overview of the architectural design and the design for the system.
- A demonstration of the final software system.
- An overview of how the team went about testing the system.
- Lessons learned from completing the project

This presentation should be intended for a professional audience. The presentation will not only be graded by content, but also by how it is presented. The criteria for grading this project can be broken down into the following categories

- **Content** – You should have each of the components mentioned above along with any material that is necessary to understand your presentation. You can assume that your audience has understanding of your software system's domain, but do not assume they are experts of software engineering concepts.
- **Organization** – Material should be presented in a logical and easy to understand sequence.
- **Visual aid** – Presenters should make a proper use of visual aids to help the audience understand the system. The focus of the presentation should be on the presenter with the visual aids serving as support.
- **Elocution and Eye Contact –** Presenters should use a clear voice and correct pronunciation so that the audience can hear and understand the presentation. Presenters should maintain eye contact with the audience and not read their presentation.
- **Professionalism –** Presenters should avoid derogatory remarks and answer questions in a professional manner.
